## The Community Ribbon

The huge problem in urban cities is lack of social interaction and Urban Heat Island.

- The site is chosen in such a way that it would be a community hub for the localities as well as tourists.
- To reduce the problem of UHI and to promote sustainability and socio- cultural interaction, an open and green park space is proposed.
- Also, energy could be generated from the moving vehicles on the flyover which could be used for lighting and other purposes.
- Upcycled urban waste and surgical masks could be used as a sustainable building material. Also, spaces like performance centers, cafeteria, and small shops could be integrated to promote revenue generation.
- The concept of a ribbon was chosen to allow for the free flowing of spaces.
- The park could promote health and well-being of people through the addition of small activities and equipment, thus holistically promoting sustainability and well-being of the people and the surroundings.
